

TRAVIS HANES

Canton, GA | Cybersecurity Operations • Threat Analysis • Incident Response • Defensive Security

PROFESSIONAL SUMMARY

Cybersecurity professional transitioning from U.S. Navy cryptologic intelligence and operational leadership into security operations, threat analysis, incident response, and defensive security. Security+ certified with hands-on lab experience in vulnerability assessment, exploitation validation, Active Directory administration, Group Policy, Windows security hardening, PowerShell, centralized event collection, authentication monitoring, and technical troubleshooting. Brings experience analyzing threat indicators, producing mission-critical intelligence, leading teams in high-pressure environments, and communicating technical findings clearly.

CORE CYBERSECURITY SKILLS

Security Operations: Alert analysis, threat analysis, incident-response fundamentals, authentication monitoring, security logging, technical troubleshooting

Windows / Identity: Windows Server, Windows 11, Active Directory, Group Policy, DNS, PowerShell, Windows Defender Firewall, Microsoft Defender Antivirus, Windows Event Forwarding

Vulnerability & Offensive Validation: Nmap, service enumeration, vulnerability assessment, Metasploit, controlled exploitation, privilege validation, remediation planning

Platforms & Tools: Linux, Kali Linux, Metasploitable 2, VirtualBox, Git, GitHub

CERTIFICATIONS & DEVELOPMENT

• **CompTIA Security+** — Certified • **CompTIA CySA+** — In Progress • **SANS Undergraduate Certificate Program** — Planned

CYBERSECURITY PROJECTS

Windows Active Directory Security Lab

Personal Cybersecurity Lab

- Built and secured a Windows domain environment using Windows Server, Active Directory, Group Policy, DNS, Windows 11, PowerShell, and Windows Event Forwarding.
- Created organizational units, user and administrative accounts, computer objects, and departmental security groups to support centralized identity and role-based access management.
- Applied a workstation security baseline through Group Policy to centrally manage Windows Defender Firewall and Microsoft Defender Antivirus settings.
- Configured Advanced Audit Policy and centralized event collection to capture authentication, account-management, logon, and process activity for security analysis.
- Implemented Windows Event Forwarding from a Windows 11 endpoint to the domain controller and created a custom Event Viewer view for failed authentication activity (Event ID 4625).
- Troubleshoot domain connectivity, permissions, DNS, policy application, and event-collection issues throughout the build.

Vulnerability Assessment & Exploitation Lab

Kali Linux / Metasploitable 2 — Isolated Training Environment

- Performed network discovery and service/version enumeration with Nmap to identify exposed services and prioritize potential attack paths.
- Validated selected vulnerabilities through controlled testing rather than relying solely on open ports or version information.
- Used Metasploit against intentionally vulnerable VSFTPD and Samba services to confirm remote exploitation paths and root-level command execution.
- Assessed technical impact and documented practical remediation recommendations including vulnerable software replacement, unnecessary service removal, network restrictions, and attack-surface reduction.

PROFESSIONAL EXPERIENCE

U.S. Navy — Cryptologic Technician / Reporter (CTR2, E-5)

USS George H. W. Bush (CVN-77) | 2014–2018

- Collected, analyzed, and reported foreign digital communications and technical intelligence in support of operational and national-security objectives.
- Monitored threat indicators, analyzed encrypted communications, and produced intelligence reporting for mission-critical operations.

- Supported Operation Inherent Resolve by helping track hostile UAV activity, communication frequencies, and high-value targets.
- Led approximately 35 personnel during operational missions while maintaining accountability, workflow coordination, and reporting standards.
- Trained coalition personnel on cyber-intelligence collection, analysis, and secure reporting procedures to improve interoperability and intelligence sharing.
- Operated and maintained specialized cryptologic systems and multi-million-dollar mission equipment in high-tempo environments.

Operations Leadership — Hospitality & Entertainment Management

Supervisor • Travel Trainer • Assistant General Manager • General Manager | 2018–2025

- Progressed through leadership roles managing teams ranging from 30 to more than 100 employees across high-volume operations.
- Managed staffing, scheduling, inventory, budgeting, financial reporting, operational risk, and performance accountability.
- Oversaw multi-venue operations with combined inventory exceeding \$400,000 and responsibility for revenue, cost control, and service continuity.
- Developed and trained new managers, standardized procedures, and used operational and financial data to identify inefficiencies and support business decisions.
- Led teams through organizational change, large events, high-pressure operations, and rapidly changing business requirements.

EDUCATION

American Military University — Bachelor of Arts in Business Studies

Expected November 2026

Academic studies focused on business, leadership, technology, risk, ethics, and organizational decision-making while completing independent cybersecurity training and hands-on security labs.

ADDITIONAL QUALIFICATIONS

Former U.S. Navy cryptologic intelligence professional; previously held TS/SCI clearance. Experience translating complex technical information for operational stakeholders, documenting findings, training personnel, and leading teams in mission-critical environments.
